## AGRIS Solar Performance Update

PRODUCTION		
2018 kWh	2017 kWh	Variance
506,932	452,109	12%

IRRADIANCE		
2018 W/m <sup>2</sup>	2017 W/m <sup>2</sup>	Variance
111	93	19%

### JANUARY 2018 COMMENTARY

Production in January 2018 was 12% higher than the previous year. Production is driven by irradiance (a measure of the amount of sunlight that reaches the panels) and expectations of production are driven by historical irradiance levels. If irradiance is different than it has been historically, our expectations for production change.

Projects produced more than in January 2017 primarily due to higher irradiance. Similarly to last year, the entire portfolio experienced snow cover which negatively affected their performance.

Please note that the next Annual General Meeting (AGM) for the AGRIS Solar Co-op has been tentatively scheduled for April 5<sup>th</sup>, 2018.
